LinkedIn

PROFILE

Backend and automation engineer working across application development, integrations, Linux infrastructure and applied AI. Builds practical systems that connect tools, reduce repeated work and move ideas into dependable software.

CORE SKILLS

Engineering: Python, backend development, APIs, integrations, automation, web scraping

Delivery: Linux, Docker, Nginx, deployment workflows

Applied AI: AI-assisted development, open-source language models, prompt engineering

SELECTED PUBLIC PROJECTS

Smart Wheelchair | GitHub

Final-year accessibility project focused on assistive navigation and embedded systems.

DataDash | GitHub

Open-source, cross-platform application designed for secure and efficient file transfers.

WebScraper | GitHub

Public Python project for extracting structured information from the web.

Career Path Recommender | GitHub

Lightweight AI tool that extracts user preferences from conversations and recommends career paths using open-source language models and prompt engineering.

EXPERIENCE HIGHLIGHTS

- More than three years of hands-on Linux experience.
- Backend and automation work spanning deployment, integrations and application development.
- Experience using Docker and Nginx in multi-server delivery environments.

This resume includes only public-safe, verified information. Dates, employer details and education credentials can be added after confirmation.
